Lubricity

The engine lubricating characteristics of diesel fuel were reduced along with the EPA’s mandate for Ultra Low Sulfur Diesel (ULSD). ULSD improves air quality. While beneficial to the environment, it also requires special additives to offset the reduced lubricity.

◆ XLP® diesel boosters provide additional lubricity to help exceed ASTM D6079 and to help meet the Engine Manufacturers Association recommendation.

◆ XLP diesel boosters can help increase service life of fuel handling and metering system parts and components without contributing to combustion deposits.

Winter Operability

In cold temperatures diesel fuel tends to gel and form wax crystals. The wax crystals can plug diesel fuel filters and restrict the fuel flow to engines. Engines lose power, and may stall or fail to start.

◆ XLP diesel boosters modify the size and shape of wax crystals, and help the treated fuel flow through the fuel system and fuel filter at lower temperatures.

Made in USA

Your consistent answer to inconsistent fuel!
A dirty fuel system can mean lower mileage and shorter engine life. Conditioning your engine’s insides with XLP® Diesel Fuel Performance Boosters restore lost fuel economy and power, and improve engine performance.

**XLP Diesel Fuel Performance Boosters can help —**

- Meet lubricity recommendations of the Engine Manufacturers Association
- Restore lost fuel economy
- Extend fuel storage life
- Reduce emissions
- Reduce pour point by as much as 35°F
- Reduce cold filter plugging point by as much as 32°F
- Clean up and keep fuel injectors clean
- Provide corrosion protection
- Demulsify water (separates water and fuel)

**Detergency**

Superb detergency promotes more complete combustion of diesel fuel in the cylinders. Improved combustion leads to reduced emissions as well as reduced opacity (smoke) and improved power and fuel economy. The use of detergent in diesel fuel can help:

- Control fuel injector tip deposits and internal injector deposits
- Reduce emissions
- Restore lost fuel economy and horsepower

**Super Concentrate for Multiple Treatments**

One bottle of XLP Diesel Fuel Performance Boosters treats multiple tanks of diesel, making it a great value.

- One gallon (128 oz) treats 600 gallons of diesel fuel

Your consistent answer to inconsistent fuel!
